

AirPort Extreme Encryption Support

When using Apple's® AirPort Extreme, you will find that the router unit supports several different encryption settings. Our NetWorks™ Global Radio recognizes two of the five encryptions listed below.

The five encryptions are:

- wep (transitional)
- **wpa/wpa2 personal**
- **wpa2 personal**
- wpa/wpa2 enterprise
- wpa2 enterprise

The two “**personal**” encryptions listed work with our unit. The first one (transitional) will not work, and the last two are not designed or intended for home use.

If you find that you are not able to play BBC, or real audio, you will need to open TCP Port 554 on your firewall.
